

1

### How far out are the expiration dates on your ophthalmic solutions?

**Up to a year!** This means less lost revenue for your practice.

2

### Why are your expiration dates so long?

**Epicur Pharma is a licensed 503B facility. Our expiration dates are determined through extensive stability testing.** Traditional 503A compounding pharmacies are required to use BUDs, or Beyond-Use Dates, which are developed using clinical literature and USP guidelines rather than direct data and evidence.

In contrast, the expiration dates assigned to 503B manufactured medications can range from months to years. The longer time frame makes it practical to stock 503B manufactured medications for office use, allowing patients to receive immediate care while also maximizing practice profitability.

3

### What is your turnaround time?

**All medications Epicur manufactures are ready to ship same day and transit time is 1-2 days.** With fast turnaround and shipping, we help your practice avoid backorders and stay stocked for critical patient care.

5

### Why are opaque eye drop bottles often better than clear bottles?

**Opaque bottles offer more protection for eye drops.** Light can diminish the integrity of certain ophthalmic medications. When eye drops are dispensed in clear bottles, your practice might have to spend additional time and money to put the bottles into amber-colored vials and educate the pet owner on proper storage.

4

### What is the difference between Epicur Pharma and a traditional compounding pharmacy?

**Epicur is a 503B FDA-registered manufacturing facility.** This means that veterinary hospitals can legally purchase from us for unlimited hospital administration and dispensing\* when medically necessary. \*FDA Federal SEC. 503B. [21 U.S.C. 353b]
