

Next-Generation Buprenorphine Analgesic

Relief that lasts. Research that matters.

The new gold standard in lab animal pain relief.

Small volumes • Ease of injection • Lower viscosity

Epicur's new long-acting Buprenorphine ER analgesic is specifically formulated for research rats and mice, developed with input from laboratory animal veterinarians, scientists, research personnel, vivarium directors and distributors across North America and Europe.

- cGMP-compliant manufacturing
- Single injection
- 72-96 hours of relief

Advanced pain relief for lab rodents

Regulatory-driven enhanced pain mitigation

Compliant with GFI #256 available for office use in every state except ND

High-protocol compliance

reduced error margin & pharmaceutical waste, improved regulatory compliance

Optimized viscosity compatible with small-gauge

compatible with small-gauge needles (27-30G)

Compatible with most research protocols

involving post-op and post-procedure pain

Breakthroughs shouldn't be delayed.

Order our longer-lasting buprenorphine for your lab or facility today.

The Epicur Pharma® Advantage

We offer one of the largest selections of 503B manufactured drugs that are traditionally compounded for animal health among currently registered 503B facilities nationwide. Every drug manufactured by Epicur meets FDA standards.

- 100% manufactured medications following FDA-enforced regulations
- Medications are verified through stability and sterility testing
- Longer expiration dates than 503A compounded medications

503B FDA Registered Outsourcing Facility
