

Where You Source Your Medications Matters

**503B FDA Registered
Outsourcing Facility**

- ✓ Opaque bottles; protecting formulation from light
- ✓ Longer (proven) expiration dates of up to 365 days
- ✓ Final product testing, following FDA cGMP regulations required, including potency, sterility, pH, content uniformity, disintegration and more
- ✓ Same proven, tested ophthalmic formulations for over 20 years
- ✓ Transparency in formulation test results

Compounded Alternatives

- ✗ Clear bottles; compromising product stability when exposed to light
- ✗ Short expiration/ beyond-use dates (BUD)
- ✗ Finished product testing is not required for 503A compounded medications
- ✗ Lot number to lot number, inconsistent formulations resulting in a mystery medication from 503A compounders
- ✗ Reports of stinging, redness, and chronic irritation

Same Drug Name. Different Formulation. Different Standards.

Compounded medications are not generics. Products from different facilities containing the same active ingredient often differ in formulation, testing, regulatory requirements, and dating. Variations between 503A/503B facilities and among individual compounding pharmacies can negatively impact quality, consistency, and the animal's overall health.

Epicur Pharma is dedicated to elevating the standards in animal healthcare. We offer one of the largest selections of manufactured medications that are traditionally compounded. Our commitment to drug consistency and quality emphasizes our devotion to patient safety.
